

InverShield

Secure Your Power. Protect Your Investment

Features:

- **Durable Construction:** Made from galvanised or stainless steel UV-stabilised coated mesh to resist rust, corrosion and weathering
- **Finish:** Powder or zinc coated for corrosion resistance
- **Dimensions / Mesh Size:** Completely custom to suit client needs and to fit inverter models or cable runs
- **Protective Design:** Fully encloses inverter cables and junctions while allowing airflow and heat dissipation
- **Animal-Resistant:** Mesh spacing and structure specifically designed to prevent sheep and other livestock from biting or accessing cables
- **Easy Installation:** Simple to fit around existing wiring or inverter frames with minimal tools required
- **Ventilated & Safe:** Maintains ventilation for electrical components and avoids overheating risks
- **Low Maintenance:** Long-lasting protection requiring minimal upkeep once installed
- **Mounting:** Bolt-on brackets

Protects solar panel inverter cables and connections from livestock damage, especially from sheep chewing or rubbing

Designed for use in solar farms, agricultural installations, and rural solar setups where animals have access to the panels

Benefits:

- **Prevents costly downtime due to cable damage**
- **Reduces maintenance and replacement costs**
- **Increases overall system reliability and lifespan**
- **Keeps livestock safe from electric hazards**
- **Suitable for harsh outdoor environments**
